BLR
PERFORMANCE INNOVATION
Better Performance Starts With Better Technology™

Unparalleled COMFORT FOR YOUR KING AIR

Introducing the 7-blade Whisper Prop, powered by the same MT technology you know and trust. Building on the proven performance of our five-blade series, this new addition brings an optimized balance of power and precision, making it perfect for those seeking a superior flying experience.

BENEFITS

➤ **Quietest propeller available for the King Air 300 series.**

➤ **Lowest certified takeoff noise.**

➤ **Cruise in comfort with lower cockpit and cabin noise.**

➤ **Improved climb performance. Climb faster from wheels up.**

➤ Resin-filled wood core structural matrix, with a 45% higher damping coefficient to reduce noise and vibration.

➤ Less vibration fatigue on the aircraft and cockpit instruments.

➤ No ground RPM limitations which means smoother taxiing, less brake wear and added fuel savings.

➤ Part of a modification kit that includes vortex generators and rudder gap seals for improved aerodynamics.

➤ In-field and on-aircraft repairs using epoxy cure, to restore the factory blade OML.

➤ Nickel-Cobalt leading edge blade protection provides 3x more damage resistance than aluminum with superior erosion protection.

➤ In-field blade replacements without changing hubs, simply swap blades and fly with no shop rebalancing, for quick return-to-service.

➤ Smaller diameter reduces propeller noise and increases ground clearance for better FOD avoidance, without any decrease in performance.

Building on the legacy of the Whisper Prop series...
