PERFORMANCE INNOVATION

Better Performance Starts With Better Technology™

## FEATURES & BENEFITS

Increased Hover Load, Stability and Reduction in Pilot Workload.

Up to 10% Increase in Available Right Pedal.

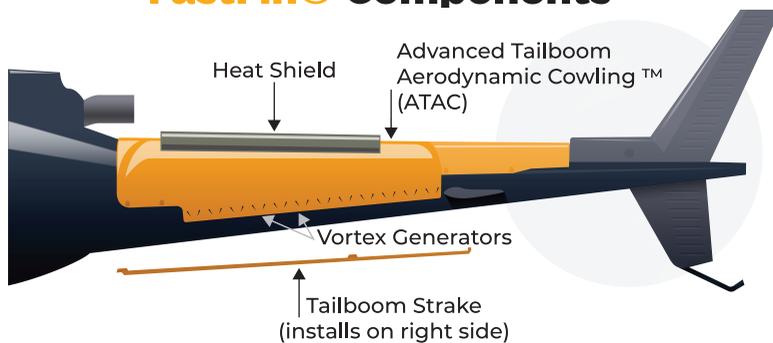

Improved Management of the Yaw Axis when Hovering in Challenging Crosswinds.

Easier Control in Precision Hover-Hold Operations.

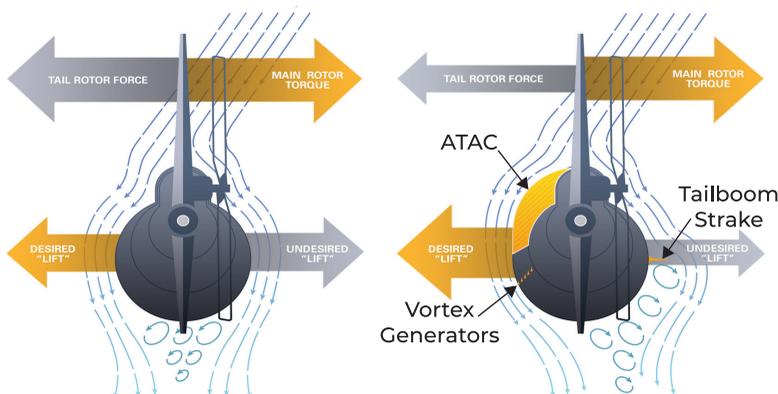

## HOW IT WORKS

The FastFin® uses advance airflow management to increase the effectiveness of the H125 anti-torque system. The H125 system does not modify the vertical fin, but is comprised of an Advanced Tailboom Aerodynamic Cowling (ATAC), a Tailboom Strake and Vortex Generators.

### FastFin® Components

### Tailboom Airflow

### AS350 B3e Power Performance No Wind or Headwind

Useful Load Increase - AS350 B3e with BLR FastFin(R)  
 (No Wind or Headwind, Airbus Power Upgrade Installed)
